Industrial applicability (IA)

1. Reference is made to the following document: D1: WO 9926330

Claims

Claims

- 2. D1 (page 20, line 20 to page 124, line 19; figures 1 to 14), which is considered to be the prior art closest to the subject matter of claim 1, describes (the references between parentheses apply to said document) a recharging apparatus with a portable charger including:
 - a connection (AC/DC converter, figure 6-2) to a power supply;
 - a plurality of points (Variable High-Voltage DC outputs, Variable Low-Voltage outputs) for connecting rechargeable portable devices having different uses;
 - an adapter, which draws power from the power supply and adapts it to the recharging power supply of the rechargeable portable devices, said adapter including a microprocessor (figure 10);
 - a converter (DC/DC converter, figure 6-2 or Controllable Regulator, figure 10) provided with a plurality of outputs for supplying voltages and currents suitable for the devices to be recharged, the adapter adapting the charging

International application No. PCT/FR 03/01995

power supply to the portable device according to a charging program supplied to the charger.

The subject matter of claim 1 differs from the known apparatus in that it further includes a plurality of rechargeable portable devices having different uses connected to the charger, which adapts a portable receiving device to a portable source device.

The subject matter of claim 1 is therefore novel (PCT Article 33(2)).

The problem addressed by the present invention is that of recharging different rechargeable devices simultaneously and in a manner suitable for each device, and also that of ensuring the transmission of information between two devices connected to the charger.

The solution to this problem, as proposed in claim 1 of the present application, is considered to involve an inventive step (PCT Article 33(3)), since several devices having different uses are connected to a single charger and said devices also include a source device and a receiving device.

- 3. Claims 2 to 25 are dependent on claim 1 and thus also comply, as such, with the PCT requirements of novelty and inventive step.
- 4. Other important observations.
- 4.1 Contrary to the requirement of PCT Rule 5.1(a)(ii), the relevant prior art disclosed in D1 has not been indicated in the description, nor has said document been cited.

International application No. PCT/FR 03/01995

- 4.2 Independent claim 1 has not been drafted in two parts, as required by PCT Rule 6.3(b), yet such a drafting would appear to be appropriate in this particular case, with a preamble containing the combination of features known from the prior art (D1) (PCT Rule 6.3(b)(i)), and a characterising part containing the remaining features (PCT Rule 6.3(b)(ii)).
- 4.3 Contrary to the requirements of PCT Rule
 5.1(a)(iii), the description is not consistent with
 the claims, since in the first part a charger is
 mentioned and not a recharging apparatus.
- 4.4 Contrary to the requirements of PCT Rule
 5.1(a)(iii), the description is not consistent with the claims.
- 4.5 Figures 3 to 6 are not drawn up in accordance with PCT Rule 11.13.
